### DETAILED ACTION

Claim 23 has been incorrectly numbered as "claim 24". Original claim 24 has been re-numbered as claim 23 according to 37 CFR 1.126

In claims 15-16, 18, and 21-23, SEQ ID NO:'S have been specified that do not correspond to the appropriate nucleic acid or amino acid sequence as claimed. Correction is required.

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Applicant is reminded that nucleotide sequences are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute **independent and distinct** inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq (see MPEP 803.04 and 2434).

Applicant is advised to select a corresponding pair of sequences (if appropriate) when electing an Invention (i.e., SEQ ID NO:1 with SEQ ID NO:3 or SEQ ID NO:2 with SEQ ID NO:4)

- I. Claims 1-5, 9-13, 15-17, drawn to a probe and an isolated nucleic acid construct comprising a nucleic sequence encoding an amino acid sequence, transgenic plant or bacterial cell and method of altering phenylalanine ammonia lyase (PAL) levels, classified in class 800, subclass 298 for example.
- II. Claims 6-8 and 21-23, drawn to a kit comprising an antibody, classified in class 424, subclass 130.1 for example.
- III. Claim 14, drawn to a degenerate primer pair, classified in class 536, subclass 24.3 for example.

IV. Claims 18-20, drawn to a method of measuring the relative amount of PAL levels, classified in class 435, subclass 91.1 for example.

Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the isolated nucleic acid of Group I, the kit of Group II and the degenerate primer pair of Group III differ in composition, structure and function.

Inventions II and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the kit can be used for another purpose other than measuring the amount of PAL levels in a sample. For example, detecting the presence of the antibody epitope in invisible ink.

Each of Inventions I-IV are capable of being separately made, independently used, and the patentability of one does not render the others obvious or unpatentable.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, fields of search (literature and sequence), and classification, restriction for examination purposes as indicated is proper.

Art Unit: 1638

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
